

MOBILE COUNTERWEIGHT PYLON-SYSTEM FOR MONITORS FROM 65-86"

MANUALLY HEIGHT ADJUSTABLE

PRODUCT

This mobile, manually height-adjustable counterweight system for monitors is compatible with all touchscreen displays available on the market, from 65" to 86" screens.

The display bracket slides between the two pylons so that the height of the display can be adjusted manually. It is held in its place due to the counterweights on the back of the system. This ensures that every user can work and present at the ergonomically best height.

The counterweights run horizontally between the pylons and can be adjusted to any screen of your choice, even after changing the display or adding whiteboard wings.

The stable H-mobile base with 4 heavy duty castors (2 of which can be locked) enables the unit to be easily moved from room to room.

Accessories

Swivel arm for notebooks

Two whiteboard side wings

FEATURES

- Please indicate the model of the display when placing your order
